No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | SIDS2/gcgdata/geneseq/geneseqn-embl/NA1980.DAT:*

                                                                                                                                                                                                                                                                                                                                                                      subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents the nucleotide sequence including and surrounding the fusion juncture in the PAX8e9-PPARgammael DNA.
                                                                                                                                                                                                                                                                              contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                    The invention relates to an oncogene designated PAX8-PPARgammal that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        invention relates to an oncogene designated PAX8-PPARgammal that
                                                                                       New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PAX8-PPARgammal; oncogene; cytostatic; PAX8; PPARgammal; cancer; follicular carcinoma; PAX8e9(-exon 8)-PPARgammael; human; ss.

methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgamma1, where the disorder is cancer, e.g. follioular carcinoma. The PAX8-PPARgamma1 molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX8e9(-exon 8)-PPARgammae1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       contains a PAX8 coding region fused to PpÄRgammal coding řegion. The PAX8-PPARgammal polypepides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleocide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX889-PPARgammael polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an oncogene designated PAX8-PPARgammal that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma

The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgammal ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX867-PPARgammael polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma

The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents the nucleotide sequence including and surrounding the translocation fusion juncture in the PAX867-PPARgammael

The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic
                                                                                                                                                              The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology, A PPARgammal ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PPARgamma polypeptide encoding cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gene, liver cancer, ds, hepatocellular carcinoma; hepatotropic; metastatic liver tumour; cytostatic; expression profile; disease state; disease progression; drug toxicity; drug efficacy; drug metabolism.

                          expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a human peroxisome proliferator-activated receptor gamma (PPAR-gamma) polypeptide. PPAR are orphan receptors, and may play a role in proliferative and differentiation aspects of cancer. The PPAR-gamma polynucloide is useful for detecting a mRNA transcript that encodes PPAR polypeptide. It is also useful for detecting hybrid formation. The PPAR-gamma polypeptide is useful in diagnostics, drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /product= "peroxisome proliferator-activated receptor

The DNA and protein sequences are useful for the treatment, diagnosis and prevention of various types of disorder in a mammalian subject such as a human, dog, monkey, mouse, hamster or rat. The disorders include cancers such as leukaemia, lymphoma and neuroblastoma, autoimmune disorders such as multiple sclerosis, connective tissue disease, rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diabetes mellitus, allegic rhinitis, asthma and eczema, nervous system disorders such as Parkinson's disease, Alzheimer's disease, Huntington's chorea, amyotrophic lateral solerosis, spinal muscular atrophy and wernicke disease, inflammatory disorders such as nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis and inflammatory bowel disease. The sequences exhibit activity relating to angiogenesis, ell proliferation, cell differentiation, stem cell growth factor, activity relating to inhibit factor, activity can be used to manipulate stem cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ren F;

in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, accidental damage or genetic disorders. The sequences may also be used for regeneration of bone, cartilage, tendons and ligaments and in tissue repair and burn healing. Note: Some sequences for this patent did not form part of the printed specification, but were obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents the nucleotide sequence including and surrounding the fusion juncture in the PAX8e8-PPARgammael DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX86-PPARgammael polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0;
                                                                                                                                                                                                                                                                                                                                                                                                                           peroxisome proliferator activated receptors (PPAR) gammal and gammal.

The invention is useful for treating cancer and other disorders including excessive cell proliferation and viral infection. The invention is also directed to the use of PPAR gammal and gammal to identify compounds that are antiproliferative, antiviral and antitumour agents. The invention also relates to a method of treating cancer using a pharmaceutical composition comprising this accordance using a pharmaceutical composition comprising this accoldance in an amount sufficient to modulate PPAR gammal and gammal activity. The present cDNA sequence encodes human peroxisome proliferator activated receptor (PPAR) gammal

```

```
Contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PPARgamma polypeptide encoding cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cytostatic; antiinflammatory, antisense oligonucleotide; PPARgamma; peroxisome proliferator-activated receptor gamma; transcription factor; nuclear hormone receptor; human; infection; inflammation; tumour; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an oncogene designated PAX8-PPARgammal that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0;

Novel antisense compounds capable of modulating expression of peroxisome proliferator-activated receptor gamma useful for diagnosis, prophylaxis and treatment of diseases associated with expression of the receptor

Example 13; Column 45-48; 40pp; English.

Peroxisome proliferator-activated receptors (PPARs) are members of the nuclear hormone receptor subfamily of transcription factors. The present invention relates to antisense oligonucleotides (see AAF23652-F23711), targeted to a nucleic acid molecule encoding human PPARgamma, which sepecifically hybridises with and inhibits the expression of human PPARgamma. The present sequence is the coding sequence for human PPARgamma. The PPARgamma antisense oligonucleotides of the present invention can be used in the diagnosis and treatment of diseases associated with the expression of PPARgamma, e.g. to prevent or delay infection, inflammation or tumour formation.

Patent No. US20020106796A1

GENERAL INFORMATION:

APPLICANT: Fletcher, Jonathan A.

APPLICANT: Kroll, Todd G.

TITLE OF INVENTION: PAX8-PPRGamma NUCLEIC ACID MOLECULES

TITLE OF INVENTION: AND POLYPEPTIDES AND USES THEREOF

FILE REFERENCE: B0801/7196/ERRP/MAT

CURRENT FILING DATE: 2001-01-18

PRIOR APPLICATION NUMBER: US 60/177,109

PRIOR PILING DATE: 2000-01-20

PRIOR PILING DATE: 2000-01-20

PRIOR PILING DATE: 2000-01-20

PRIOR PILING DATE: 2000-08-14

NUMBER OF SOU ID NOS: 47

SOUTWARE PASSEQ for Windows Version 3.0
